KEY RISKS

What are the key risks associated with this product?

Interest rate risk	<p>Interest rate risk refers to the impact of interest rate changes on the valuation of bonds or other forms of securitised debt, money market instruments and deposits. When interest rates rise, prices of bonds or other forms of securitised debt generally decline and this may lower the market value of the fund's investment in bonds or other forms of securitised debt. The reverse applies when interest rates fall. The returns of the fund's investments in money market instruments and deposits move in tandem with interest rates. A decline in interest rates will lower the returns of the fund's investments in money market instruments and deposits. For example, when interest rates fall, deposit placements would be reinvested at lower interest rates and subsequently yield lower returns to the fund.</p>
Credit risk	<p>Credit risk relates to the creditworthiness of the issuer of the securities or money market instruments and deposits which is dependent on the issuer's ability to make timely payments of interest or principal. In the event that the issuer of a security or money market instruments and deposits defaults in the payment of interest and/or principal, the value of the fund may be adversely affected.</p>
Liquidity risk	<p>Liquidity risk refers to the ease of liquidating an asset depending on the asset's volume traded in the market. If the fund holds assets that are illiquid, or are difficult to dispose of, the value of the fund will be negatively affected when it has to sell such assets at unfavourable prices.</p>

You are advised to read the fund's prospectus and understand the risks involved and, if necessary, consult your professional adviser(s) before investing.

1-Year Fund Performance Review

PMMF registered a total return of +3.47% for the financial year ended 31 January 2025 in comparison to its benchmark's return of +2.14% over the same period.

Notes:

* The figure shown is for the period since the fund's commencement (16 December 2003).

** Prior to 30 April 2010, the fund's benchmark was based on the 3-Month Kuala Lumpur Interbank Offered Rate (KLIBOR).

From 30 April 2010 to 29 April 2013, the fund's benchmark was based on the 1-Month KLIBOR.

Effective from 30 April 2013, the fund's benchmark has been replaced with a composite index of 90% Public Bank 1-Month Fixed Deposit Rate and 10% Public Bank Savings Rate – ACE Account as this composite benchmark is a better representative of the fund's investments.

The calculation of the above returns is based on NAV-to-NAV basis, and is sourced from Lipper.

Average annual returns of the fund are derived by dividing the total returns of the fund with the number of years under review.

Commencement date is the last day of the initial offer period.

Portfolio Turnover Ratio (PTR)

	2023	2024	2025
PTR (time)	-	-	-

For the financial years ended 2023, 2024 and 2025, the fund's PTR was zero as the fund only placed deposits with financial institutions during the year.
